ANALOG WAY®
Pioneer in Analog, Leader in Digital

Simulate any Alta 4K series seamless presentation switcher on your PC or Mac

Alta 4K Simulator

Web RCS

Create your configuration offline

Alta 4K Simulator allows you to simulate any **Alta 4K** series system on your PC or your Mac. You can launch the integrated Web-based graphic user interface (Web RCS), interact with the virtual device to design and prepare a show on the road as you would do with a real device. You can then export the show to a USB drive and import it straight into your **Alta 4K** seamless presentation switcher.

Alta 4K Simulator at a glance

▶ Simulate any **Alta** 4K series seamless presentation switcher (no 'real' device needed): Zenith 100 or Zenith 200

▶ Easily select and configure the device you want to simulate using the configurator included

▶ Use the integrated **Web RCS** for self-training or to start working on a customer configuration offline

▶ Save your work at the end of simulation session and seamlessly resume it the next time

▶ Export the show you have prepared with **Alta 4K Simulator** and import it straight into your **Alta 4K** seamless presentation switcher

▶ Test the REST API, the Crestron driver, the controllers as well as 3rd party controllers

Other tools also available on www.analogway.com

▶ AW VideoCompositor for Alta 4K: Design intuitive drag and drop Crestron® user interfaces to control your live events with the Alta 4K series seamless presentation switchers

▶ AW EDID Editor: Solution to create and edit EDID files for an optimal compatibility between your sources and displays

▶ AW Screen Frame Cutter: Tool to split any wide-screen image into multiple still backgrounds for your multi-projector Soft Edge Blending or for your Custom Canvas screen setup

Install steps

• Download **Alta 4K Simulator** from the Analog Way website and install it on your computer

• Launch the **Alta 4k Simulator** then click **Create new session** to create a new simulation session

• Rename the session you have just created so you can easily find it next time and resume it

• Select and configure the type of **Alta 4K** device you want to simulate (Zenith 100 or Zenith 200)

• Select the corresponding firmware you want to use

• Click **Save** then click **Start Session** to start the simulation session

• Click the **Open WebRCS** button to open the integrated **Web RCS**
